SUMMARY

Highly skilled, metrics-driven Cybersecurity Practitioner and Infrastructure Specialist specializing in advanced Web Application Penetration Testing (eWPT/eWPTX-level), Active Directory Exploitation (CRTP- level), and Enterprise Systems Administration. Proven track record of leveraging a deep background in network architecture and virtualization to conduct authorized internal audits, identify critical logical flaws, and support development teams with robust remediation.

EXPERIENCE

Corporate IT Infrastructure & Centralized Systems Specialist

Pickalbatros Hotels Group (HQ)

May 2026 - Present, Hurghada, Egypt

- Centralized Infrastructure Engineering: Manage, configure, and audit core network layout designs across global branch operations from a centralized hub, including Cisco Nexus Core, Cisco Catalyst, and SMB enterprise switches.
- Multi-Cluster Virtualization: Oversee, provision, and maintain secure enterprise private cloud infrastructures using VMware vSphere and clustered ESXi nodes.
- Vulnerability Assessment Auditing: Perform proactive security monitoring, infrastructure configuration reviews, and authorized internal vulnerability scans to eliminate configuration anomalies and protect corporate networks against external data exposure.

Server & Network Infrastructure Administrator

Sun-Rise Hotels Group

November 2023 - May 2026, Hurghada, Egypt

- Enterprise Application Administration: Administered high-availability property management environments including Opera Cloud, Suite 8 (Fidelio), Office 365 cloud architecture, and dynamic E- signature verification environments.
- Multi-Vendor Network Engineering: Installed, configured, and supported corporate routing, switching, and LAN/WLAN accessibility over Aruba and Ruijie infrastructure, while managing FortiGate 100E perimeter gateways.
- Endpoint Protection & Authorized Auditing: Enforced endpoint security via SentinelOne EDR and secured Windows Server nodes.
- Leveraged internal access to conduct authorized security assessments, discovering and reporting multiple critical flaws (such as authentication bypass backdoors via source code disclosure, unparameterized SQLi, and unauthenticated IDORs exposing guest PII).

Cybersecurity Analyst (Part-Time / Internal Auditing Projects)

Confidential Security Labs

2023 - Present, Remote

- Web Exploitation & Logical Flaws: Perform comprehensive manual and automated penetration testing to isolate critical logical bypasses, including authentication backdoors, persistent script injections (Stored XSS), and unauthenticated IDOR mapping.
- Successfully exploit advanced application-layer vulnerabilities such as blind/error-based SQL Injection, XXE, and SSTI.
- Active Directory Assessments: Audit internal enterprise authentication topologies, evaluating Kerberoasting paths, resource delegation misconfigurations, and privilege escalation vulnerabilities.

IT Specialist

Armed Forces Engineering Authority

October 2022 - November 2023, Cairo, Egypt

- Infrastructure Support: Managed server configuration nodes and local area network layers to guarantee data transmission integrity across terminal user stations.

PROJECT

Sanitized Offensive Security Write-ups

Medium Publication

- Published a series of fully redacted, technical post-mortem articles detailing authorized real-world critical findings (Hardcoded Backdoors, SQLi Defenses Bypass, Stored XSS, and Unauthenticated IDORs).
- Link to full write-ups: medium.com/@m.bafy10.

BountyForge (Offensive Security Automation)

- Developed an automated python-driven reconnaissance and vulnerability mapping framework designed for scalable infrastructure attack-surface scanning.

Vulnerability Assessment & Pentesting Methodologies

- Developed comprehensive, hands-on penetration testing playbooks covering the OWASP Top 10 framework for web applications and active directory assessment lifecycles (covering enumeration, privilege escalation, and lateral movement).
-

EDUCATION

Bachelor of Computer Science

Luxor University - Faculty of Computing and Information • Luxor City, Egypt • 2022 • 2.89

CERTIFICATIONS

CRTP – Certified Red Team Professional

Active Directory Security

eWPTX – Web Application Penetration Tester eXtreme

Advanced Web App Testing

eWPT - Certified Web Penetration Tester

OWASP Methodologies

eJPT - Junior Penetration Tester

CEH - Certified Ethical Hacker

OSCP/OSCP+ – Independent Self-Study Lifecycle

System Administration Training

Information Technology Institute (ITI)

• Qena.

SKILLS

Offensive Security: Web Application Security, Active Directory Security, Red Teaming, Internal Penetration Testing, Source Code Review, Vulnerability Assessment, Security Reporting

Tools: Burp Suite Professional, Nmap, Metasploit, BloodHound, Impacket, Mimikatz, SQLMap, Nessus, Wireshark, Hashcat, Hydra, CrackMapExec, Nuclei

Infrastructure & Networks: Windows Server, Active Directory, VMware ESXi / vCenter, Cisco Catalyst/ Nexus, FortiGate Firewalls, Aruba

Programming: Python, Bash, PowerShell
